Work Experience

Yahoo | *Software Dev Engineer II*

Mar 2025

- Led development and enhancement of the My Money personal finance platform, supporting 5M+ linked financial accounts with improved aggregation reliability and dashboard performance.
- Optimized account-linking workflows and error handling, reducing failed connections and improving financial data accuracy and user trust.
- Redesigned and improved real-time financial summary components (net worth, spending insights, asset allocation) with better state management and API efficiency.
- Designed and implemented reusable, schema-driven modules in Light Year CMS, including the Credit Card Module, reducing content publishing time by 40%
- Built and launched the Credit Card Comparison feature, enabling dynamic side-by-side product comparisons with scalable filtering logic, which boosted user engagement and helped users make more informed credit-card choices
- Migrated and optimized Yahoo Finance WebView, improving cross-platform stability, navigation consistency, and rendering performance.
- Developed and deployed monetization pages with React and Svelte, integrating affiliate tracking and analytics via Bitbucket pipelines, which increased affiliate conversion rates and boosted overall revenue

Finbox | *Software Engineer*

Sep 2024 - Feb 2025

- Developed and optimized a unified dashboard for NBFCs and MFLs using Tailwind CSS and Express.js, which streamlined financial reporting and reduced user navigation time
- Contributed to core features across the loan origination lifecycle, optimizing underwriting, approval flows, and system integrations to support scalable B2B lending operations.
- Developed and enhanced the Deviation module in FinBox, improving risk assessment accuracy and decision workflows within the B2B loan origination and lending platform.
- Architected and implemented a micro-frontend architecture for the lending dashboard and loan origination platform, enabling multiple projects to share reusable components, reducing code duplication, improving deployment independence, and accelerating feature delivery.

Fincity | *Software Development Engineer*

Nov 2021 - Aug 2024

- Managed development of a SaaS platform using Next.js, Tailwind CSS, and Swagger that let users build applications in minutes, cutting development time by 75%
- Designed and built 10 UI components (TextBox, Dropdown, Button, PhoneNumber) with drag-and-drop support in Next.js, enabling non-technical users to create applications more easily
- Created a Form Storage DnD editor from end to end, reducing form creation time by 80% through Template and Form Preview generation.
- Integrated new features into the Validation Framework using Tailwind CSS and Next.js, adding support for custom validation and eight built-in rules for UI components
- Engineered the Cost Sheet and Booking Form module using Next.js, Tailwind CSS, and Swagger in IntelliJ, enabling unit booking and increasing booking rates by 30%

Fincity, Remote | *Software Developer Intern*

Apr 2021 - Oct 2021

- Led optimization of Business Partner authentication flows, reducing load times by 50%, boosting overall performance by 40%, and improving user satisfaction by 25%.
- Improved critical features such as Sign-in/Sign-up, Walk-in, and Opportunity, resulting in better user experience and a 20% performance boost due to code optimization

Skills

- **languages:** C/C++, Java, JavaScript/TypeScript, HTML5, CSS3, MySQL, Node Js, Express Js, MongoDB, AWS, React, Webpack, Spring Boot, Svelte Js, Full Stack Development, Next.js
- **technologies.&.tools:** React, Tailwind CSS, Git, Github, Postman, Swagger, Bitbucket, Jira, VS Code, IntelliJ, OOPs, Full Stack Development, micro-frontends, SaaS, UI Design, Svelte, Flutter

Education

CMR Institute of Technology

BE in Information Science and Engineering

Aug 2017 - Aug 2021

Bangalore, India
